December 2010

Total Runway Movements (excluding helicopter operations) (refer pages 5-10)

There were a total of [26,033](#) aircraft movements this month (daily average [839.77](#)). Last month there were a total of [25,335](#) movements (daily average [844.50](#)) and for the same month last year there were a total of [24,618](#) movements (daily average [794.13](#)).

Mode Utilisation (refer pages 11 & 13)

Individual mode use in excess of 9 hours occurred on [24](#) days this month, Mode [9](#) on [14](#) days, Mode [10](#) on [9](#) days and Mode [13](#) on [1](#) day. Crossing runway modes (including Sodprops) were used for [17.99%](#) of non Curfew hours.

Mode 15 was introduced during RESA works (commenced October 2008) and ceased being used at the completion of RESA (April 2010).

Runway End Impact Long Term Operating Plan (LTOP) Targets (refer page 12)

LTOP targets - North 17% - South 55% - East 13% - West 15%

The two fundamental factors which influence the selection of a runway and therefore the LTOP targets are forecast or prevailing weather and traffic levels. This month's results are as follows:

North [29.18%](#) - This result is above the LTOP target but below the previous month ([31.49%](#))

South [49.81%](#)- This result is below the LTOP target and below the previous month ([51.58%](#))

East [16.29%](#) - This result is above the LTOP target and above the previous month ([14.69%](#))

West [4.70%](#) - This result is below the LTOP target but above the previous month ([2.22%](#))

16 Precision Runway Monitor (PRM) Operations (refer page 14)

This procedure was used on 06, 15 and 17 December for a total of 4 hours and 07 minutes (ATIS time)

Noise Enquiry Service (refer pages 15-20)

A total of [1944](#) complaints, comments and enquiries were received as follows:

[1848](#) Sydney suburbs complaints from [194](#) complainants

[28](#) Sydney suburbs comments and enquiries

[87](#) non Sydney Airport or Sydney suburbs (NSW only) complaints, comments and enquiries

Measured Daily N70 Values (refer pages 27-29)

Coogee NMT was non operational from June 2010 ongoing due to site power issue.

Sydney Airport - Daily Mode Usage

Precision Runway Monitor (PRM) Operations

In June 2002 at Sydney Airport, Airservices Australia commenced operation of the Precision Runway Monitor (PRM), a highly accurate radar system, to monitor landing operations arriving from the North. PRM landings from the South have been operating since 1999. The PRM supplements the existing Instrument Landing System (ILS), and is only used by Air Traffic Control during poor weather conditions thereby reducing air traffic delays due to weather.

The PRM operation involves two changes in procedure for arrivals from the North (Runway 16)

- Aircraft make their final turn to line up with the runways about 5-10km further north of the airport than during ILS operation.
- Within this extended area aircraft may fly at a fixed altitude of 3000ft (under ILS operation 3000-4000ft).

Airservices Australia conducted a 6 month Noise Monitoring Program from June 2002 until December 2002, which included regular reporting to Environment Australia (the Commonwealth Environmental Department at that time) and the community, to meet the requirements of the then Minister for the Environment and Heritage.

Portable Noise Monitors, which were installed in suburbs affected by PRM changes, have since been removed with the cessation of the Noise Monitoring Program.

Nevertheless Airservices Australia Noise Enquiry Service continues to collect daily statistical data relating to PRM operations on Runway 16 and associated issues. Below is a summary of data collected for **December 2010**.

Days on which Runway 16 PRM was used and hours of usage (ATIS time)

Sydney Airport - Jet Aircraft Respite (R60) (Explanation)

Respite

The respite figures in the map are based on the concept of a **respite hour** being a **whole clock hour** where there are **no aircraft movements**.

Total Respite takes into account all 7 days of the week and is based on the total number of clock hours during the period 6am to 11pm, for the period **January 2010 to December 2010**, during which there were no movements.

Morning Respite is based on the above criteria for the period 6am to 7am for all 7 days of the week.

Day Respite is based on the above criteria for the period 7am to 8pm for all 7 days of the week.

Evening Respite is based on the above criteria for the period 8pm to 11pm for all 7 days of the week.

Curfew (Night) is based on the above criteria for the period 11pm to 6am for all 7 days of the week.

The percentage figure for a category of respite refers to the proportion of the total possible number of respite hours for that category for the date period. For example, the Jet Aircraft Respite Hours map (for the last rolling year) shows that **flight path D has Total Respite hours of 58%**. This means that over the period **January 2010 to December 2010** for **58%** of the total clock hours between 6am and 11pm there were no movements on that flight path.

Notes

- Propeller movements have not been taken into account.
- The information presented in the map is derived from the Airservices Australia's NFPMS.
- The flight path bands depicted in the map are indicative only and are used to illustrate the extent of respite in different areas. Some jet movements will be outside the bands indicated.

Measured Daily N70 Values

Description

Airservices Australia maintains and operates a Noise and Flight path Monitoring System (NFPMS) at all the major Australian airports. Environment and Climate Change at Airservices Australia's head office located in Canberra regularly reports on aircraft flight paths and noise for each major Airport. The data appearing here is a summary of the N70 noise data for Sydney Airport for December 2010.

Figure 1. NMT sites about Sydney Airport and the daily N70 values for the month of December 2010

The measured daily N70 value is the average daily number of aircraft noise events whose maximum noise level (L_{Amax}) equals or exceeds 70dBA.

The daily N70 values for the various NMTs and their positions in Sydney are displayed in Figure 1. The total number of Correlated Noise Events (CNE) and the number of days each NMT was operational during December 2010 along with the Daily N70 values for the three months up to and including December are given in Table 1.

The N70 values for December 2010 have also been calculated for six different periods:

- Morning N70 value (AM), correlated noise events between 6:00am and 7:00am.
- Evening N70 value (PM), between 8:00pm and 11:00pm.
- Daytime N70 value (Day), between 7:00am and 8:00pm
- Night N70 value (Night), between 11:00pm and 6:00am
- Weekend Day N70 value (WE_D), between 6:00am and 11:00pm Saturday and Sunday.
- Weekend Night N70 value (WE_N), between midnight Friday to 6:00am
- Saturday, 11:00pm Saturday to 6:00am Sunday and 11:00pm to midnight on Sunday

These results are contained in Table 2.

Table 2. N70 values for the different periods of the day.

Due to normal maintenance activities and occasional upgrading of the system any one NMT may not have been operational for the entire sample period. As a result the average at each NMT is performed only for the period in which the NMT was operating; this ensures the daily N70 figure is not influenced by NMT downtime.
